

Dear {contact.first},
Welcome to your Clinerion Courier.

A global perspective

by Douglas Drake, Customer Solutions Director, Clinerion

Clinerion is a global digital healthcare company focused on enabling better healthcare through our Patient Network Explorer. We fundamentally believe in equality for all, including in healthcare opportunities. Our goal is to enable better patient stratification and healthcare outcomes.

In the new age of COVID-19, there is a greater need for a global perspective to healthcare data and an understanding of disease incidence, treatment paradigms and patient outcomes. Diseases and patient stratification know no borders or time zones. COVID-19 has illustrated the need for a global vision and perspective on disease, as what is happening elsewhere give us the best indication of transmittance, potential cohorts, and successful treatment regimes.

Increasingly, patients are global citizens in a global healthcare dynamic where local incidence is important to the global perspective. As Clinerion focuses on enabling better patient stratification and healthcare outcomes, our network is global: currently with 30 million live patients, across 19 countries in Europe, Eastern Europe, Turkey, Asia, the Indian subcontinent and South America. We are growing aggressively and will be at 73.5 million patients enabled by end of year. Our principle is inclusion for each individual, each person, each life, as important, critical and valuable not only within our network, but in our wider community.

The Eye of the Expert

Recruitment Challenges in Oncology

How can we overcome historical oncology recruitment barriers and get the best care for patients?

Our colleague Sébastien Wischlen's perspective on this issue was recently published in Clinical Research Insider.
