

Dear {contact.first},

Festive greetings, from Clinerion!

'Tis the season! We wish those of you who celebrate it a very merry Christmas; and we wish a wonderful holiday season to all! 2020 is coming to an end, and once again we would like to take a brief moment to reflect back on successes in what was otherwise certainly a challenging year for most of us.

The Clinerion community of partner hospitals around the world on Patient Network Explorer grew by leaps and bounds in 2020, today covering 32.9 million patients in 72 healthcare organizations in 16 countries. All this data is queryable, in real-time, on Patient Network Explorer, representing a vast real-world data resource for real-world evidence (RWE) and outcomes research, as well as for clinical trial patient search and identification. [We have another 11 countries in our pipeline, so our expansion is geared to continue!](#)

In 2020, we also expanded our offers to support real-world evidence (RWE), epidemiology, and health economics and outcomes research (HEOR) with real-world data solutions and analytics. One key extrapolation of this service was our [award-winning COVID-19 report](#). Please check out our [latest video](#), below, which outlines how we support the generation of RWE.

Of course, 2020 was pretty eventful for us – [check out all our stories >](#) And learn more about how our real-world data has been used to meaningful effect in real case studies as we continue our recently launched webinar series in 2021 – [check out the recent first edition, highlighting RWE research in our Clinerion community in Turkey >](#)

We are thrilled that all of this has meant that Clinerion has continued its run of success as a business in 2020.

Thank you for your contribution to our successful 2020! – we couldn't have come this far without you!

From the whole Clinerion Team, we wish you happy holidays, and warm greetings for the new year, ahead!

Ian Rentsch, CEO, Clinerion

Interview: Applying machine learning to real-world data

Clinerion's Douglas Drake was interviewed by The Evidence Base on how machine learning (ML) may be applied to real-world data (RWD) in order to help achieve better outreach for diagnostic testing and correct therapeutic treatment.
