CLINERION
Real World Data Solutions

Newsletter
January 2019

Did you know? Clinerion's Patient Network Explorer can generate Real-World Evidence

Patient Network Explorer's global network of partner hospitals hold a wealth of live, de-identified patient data that can be leveraged to generate real world evidence.

See the up-to-date coverage map and numbers on our homepage >

The system can perform detailed, real-time analyses of patient journeys and outcomes, comorbidities, and treatment patterns and trends, within a site or across many sites. Patient Network Explorer queries complex combinations of criteria based on five dimensions of EHR data (demographics, diagnoses, treatment, medication and laboratory test result values), which include logs of timestamps and treating departments.

All of this provides huge amounts of valuable data intelligence on disease epidemiology and treatment efficacy to support bringing innovative drugs earlier to patients.

Talk to us about your real-world evidence needs >

Patient Network Explorer is Growing!

New Hospital Partner:
North Estonia Medical Centre, Tallinn, Estonia.

The North Estonia Medical Centre (NEMC) has joined the Patient Network Explorer (PNEx) platform, expanding Clinerion's hospital network in Estonia.

Read more about NEMC joining PNEx >

New Hospital Partner:
Santa Casa da Misericordia Hospital, Porto Alegre, Brazil

The Santa Casa da Misericordia hospital expands Clinerion's network of partner hospitals in Brazil. Patients from the hospital's seven clinics will gain access to leading-edge, innovative medical treatment via Clinerion's Patient Network Explorer platform.
