

Dear {contact.first},

Festive Greetings, from Clinerion!

How quickly this year has gone by, and once more it's the festive season! We wish those of you who celebrate it a very merry Christmas; and we wish a wonderful holiday season to all!

2021 has been a time of great activity for Clinerion, with much consolidation behind the scenes as well as expansion into new geographical regions, technologies, and services for our partners and clients.

The Clinerion community of partner hospitals around the world expanded strongly in 2021, today covering 36.2 million patients in 81 healthcare organizations in 17 countries. All this data is queryable, in real-time, on Patient Network Explorer, representing a vast real-world data resource for real-world evidence (RWE) and outcomes research, as well as for clinical trial patient search and identification. We have another 7 countries in our pipeline, so our expansion is geared to continue!

In 2021, the patent for the technology underpinning Patient Network Explorer was published, underlining our ownership of intellectual property covering federated EHR database infrastructures and methods for search of patient cohorts across such platforms. We also launched our RWD RADAR service, offering aggregate patient metrics for the real-world data on Patient Network Explorer, offering deep insights into hard-to-find patient groups, locations and countries within the network, for use in epidemiology studies to look at disease occurrence, treatment metrics, by hospital, region and country, as well as to identify cohorts by location, procedure or medication.

Now, having worked out Clinerion's clear strategic vision for the future of real-world data for healthcare insights, we look ahead to 2022 with great confidence!

Thank you for your contribution to our successful 2021 – we couldn't have come this far without you! – and here's to a great start to 2022! From the whole Clinerion Team, we wish you happy holidays, and warm greetings for the new year, ahead!

With warm regards,

Bariş Erdoğan, CEO, Clinerion

P.S.: As our Christmas gift to you this year, we are offering recipients of this newsletter ONE FREE FEASIBILITY QUERY on Patient Network Explorer! Just reply to this e-mail with your details and feasibility request to start the process!

The Swiss Personalized Health Network

Clinerion Patient Network Explorer technology powers the SPHN's Federated Query System.

Clinerion Patient Network Explorer technology is powering the Federated Query System (FQS) of the Swiss Personalized Health Network (SPHN), which operates across all five of Switzerland's university hospitals in Basel, Berne, Geneva, Lausanne and Zürich. Via the FQS, authorized researchers can run feasibility queries for multistate data-driven research projects on clinical data in all five hospitals simultaneously.
