

PRESS RELEASE

Basel, Switzerland, September 21th, 2019.

Arabkir Joint Medical Center & Institute of Child and Adolescent Health joins the Patient Network Explorer platform, expanding Clinerion’s global hospital network to Armenia.

- Arabkir Joint Medical Center & Institute of Child and Adolescent Health gains visibility for participation in international clinical studies, thus bringing innovative treatment and medicines to the Center’s patients.
- Arabkir Medical Center is the first hospital in Armenia to join the Patient Network Explorer platform.

“Arabkir” Joint Medical Center & Institute of Child and Adolescent Health, in Yerevan, Armenia, has a wide specialization, which includes services for allergology, dermatovenereology, pediatric gastroenterology and hepatology, pediatric rheumatology, trauma and orthopedics, endocrinology and diabetes, pulmonology, mental health, pediatric gynecology, and neurology and epileptology, among others. The hospital has departments for hemodialysis and kidney transplantation, anesthesiology and intensive therapy, uro-surgery, ENT/otorhinolaryngology and plastic surgery, nephrology, and intensive care and resuscitation.

Patient Network Explorer matches patients from Clinerion’s global network of hospitals to clinical trials run by pharmaceutical sponsors. The system is based on de-identified EHR data, unlinked from any identifiers, which protects patient privacy. Clinerion hospital partners may use the system to identify the patients found for recruitment into trials, under ethics committee approval. This accelerates trial recruitment, and ultimately accelerates drug launch, bringing innovative drugs earlier to patients.

“With this collaboration, we aim to have our own impact in the field of medicine and drug development, as well as contribute to the evolvement of the healthcare infrastructure in the country,” says Arman Babloyan, Director of the Arabkir Joint Medical Center & Institute of Child and Adolescent Health.

“Clinerion continues its efforts to bring the latest generation medication to patients around the world,” says Ian Rentsch, CEO of Clinerion. “Supporting the identification of trial cohorts in

countries outside the traditional range enables clinical trial sites to be selected in countries with high clinical standards which have nonetheless high numbers of trial naïve patients. This accelerates trial start-up by accelerating recruitment completion and speeds up drug launch approvals.”

About Clinerion

Clinerion accelerates clinical research and medical access to treatments for patients. We use proprietary technologies for analysis of patient data from our global network of partner hospitals. Clinerion's Patient Network Explorer radically improves the efficiency and effectiveness of clinical trial recruitment by offering data-driven protocol optimization, site feasibility evaluation and real-time patient search and identification to match patients to treatments. Our technology solution provides real-world evidence analytics for medical access. Clinerion facilitates the participation of partner hospitals in leading-edge, industry-sponsored trials and time savings in patient recruitment. We create innovative and disruptive fit-for-purpose solutions which enable pharmaceutical companies to shorten patient recruitment and save costs by streamlining operations and leveraging strategic intelligence. Clinerion's proprietary Big Data analytics technologies leverage real-time data from electronic health records which comply with international patient privacy and data security regulations. Clinerion is a global data technology service company headquartered in Switzerland.
